# 1. Introduction

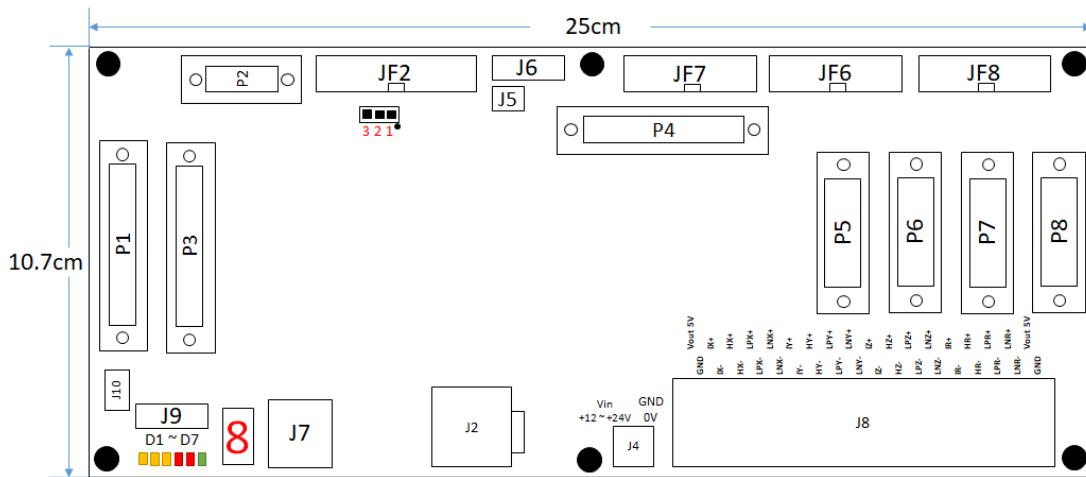

## 1-1 Specification

- ◆ Support common used brands of 16'18'20-bits high resolution ScanHead.
- ◆ Support output up to 3 axes digital scanner signal \* 2.
- ◆ Build-in DSP. No occupation of PC CPU resource.
- ◆ Scanner digital signal refresh rate: 10 us/times.
- ◆ FPK, PPK, R05 first pulse suppression.
- ◆ Two 16-bits analog control signals.
- ◆ 3-way encoder inputs.
- ◆ PWM maximum output frequency is 10MHz, minimum pulse width is 0.05μs.
- ◆ 4-way digital step/servo motor control signals at the same time, the maximum output frequency is 10MHz.
- ◆ General 16-bits digital outputs, 16 bit digital inputs.
- ◆ Specific 16-bits laser control digital outputs.
- ◆ Windows 7 / 8 / 8.1/ Windows 10.

## 1-2 Appearance

## 1-3 Layout

Iomax : Maximum Output Current

### 2-4-2 JF7、JF8 : TTL Output

| JF8 : 20Pin Box |             | JF7 : 20Pin Box              |                |
|-----------------|-------------|------------------------------|----------------|
| Descriptions    | Signal Type | Remark                       |                |
| Output 1 (1)    | ■ ●         | (2) Output 2                 | Output 17 (1)  |
| Output 3 (3)    | ● ●         | (4) Output 4                 | Output 19 (3)  |
| Output 5 (5)    | ● ●         | (6) Output 6                 | Output 21 (5)  |
| Output 7 (7)    | ● ●         | (8) Output 8                 | Output 23 (7)  |
| Output 9 (9)    | ● ●         | (10) Output 10               | Output 25 (9)  |
| Output 11 (11)  | ● ●         | (12) Output 12               | Output 27 (11) |
| Output 13 (13)  | ● ●         | (14) Output 14               | Output 29 (13) |
| Output 15 (15)  | ● ●         | (16) Output 16               | Output 31 (15) |
| GND (17)        | ● ●         | (18) GND                     | GND (17)       |
| +5V (19)        | ● ●         | (20) NC                      | +5V (19)       |
| Descriptions    | Signal Type | Remark                       |                |
| Output 1 ~ 32   | TTL Output  | $V_{OH} : 5V$ , Iomax : 25mA |                |
| Vout_5V         | +5V Output  | Iomax : 300mA                |                |
| GND             | 0V          |                              |                |

Note :  $V_{OH}$  : High Level Output Voltage (No Resistive load)

Iomax : Maximum Output Current

### 2-4-3 J4 : Power Input

| J4 : Terminal Block 2Pin   |                |                          |
|--|----------------|--------------------------|
| <br>Vin GND |                |                          |
| Descriptions   | Signal Type    | Remark                   |
| Vin  | DC +12V ~ +24V | Recommended power 15W UP |
| GND  | 0V             |                          |

### 2-4-4 J9 : LED Output

| J9 : 6Pin Wafer Connector |              |             |                                  |
|---------------------------|--------------|-------------|----------------------------------|
| Pin                       | Descriptions | Signal Type | Remark                           |
| 1                         | GND          | PC Power 0V |                                  |
| 2 ~ 5                     | D1 ~ D4      | TTL Output  | $V_{OH} : 5V$ 、 $I_{max} : 25mA$ |
| 6                         | GND          | PC Power 0V |                                  |

Note :  $V_{OH}$  : High Level Output Voltage (No Resistive load)

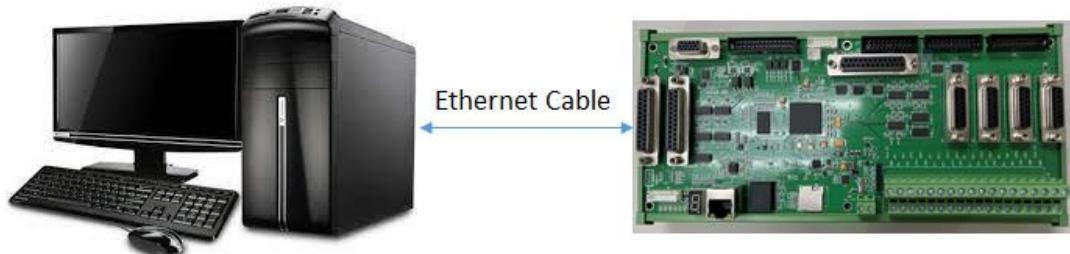

$I_{max}$  : Maximum Output Current

### 3. Installation and Setup

#### 3-1 LAN Cable connection

##### 3-1-1 Single controller

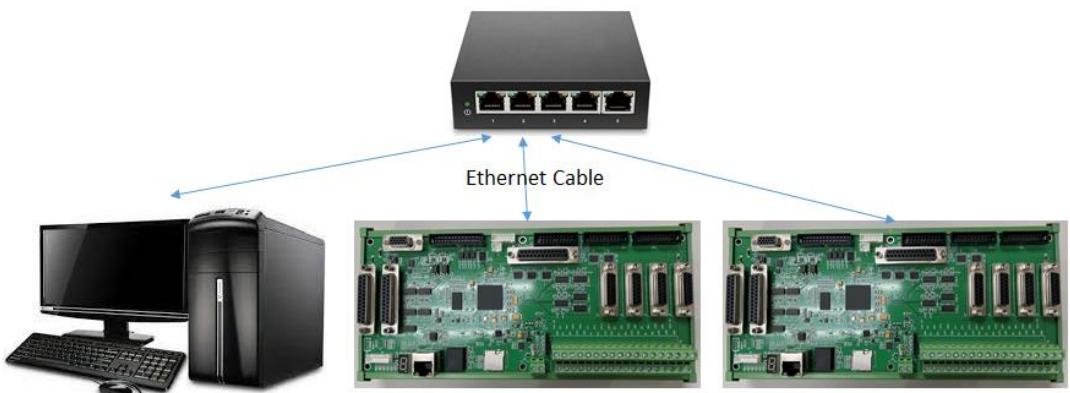

Wiring cable between PC and EMC6 directly.

Note1:Cable please using CAT6 or above.

##### 3-1-2 Multiple controllers

Wiring to multiple EMC6s by a 1Gbps Switch hub.

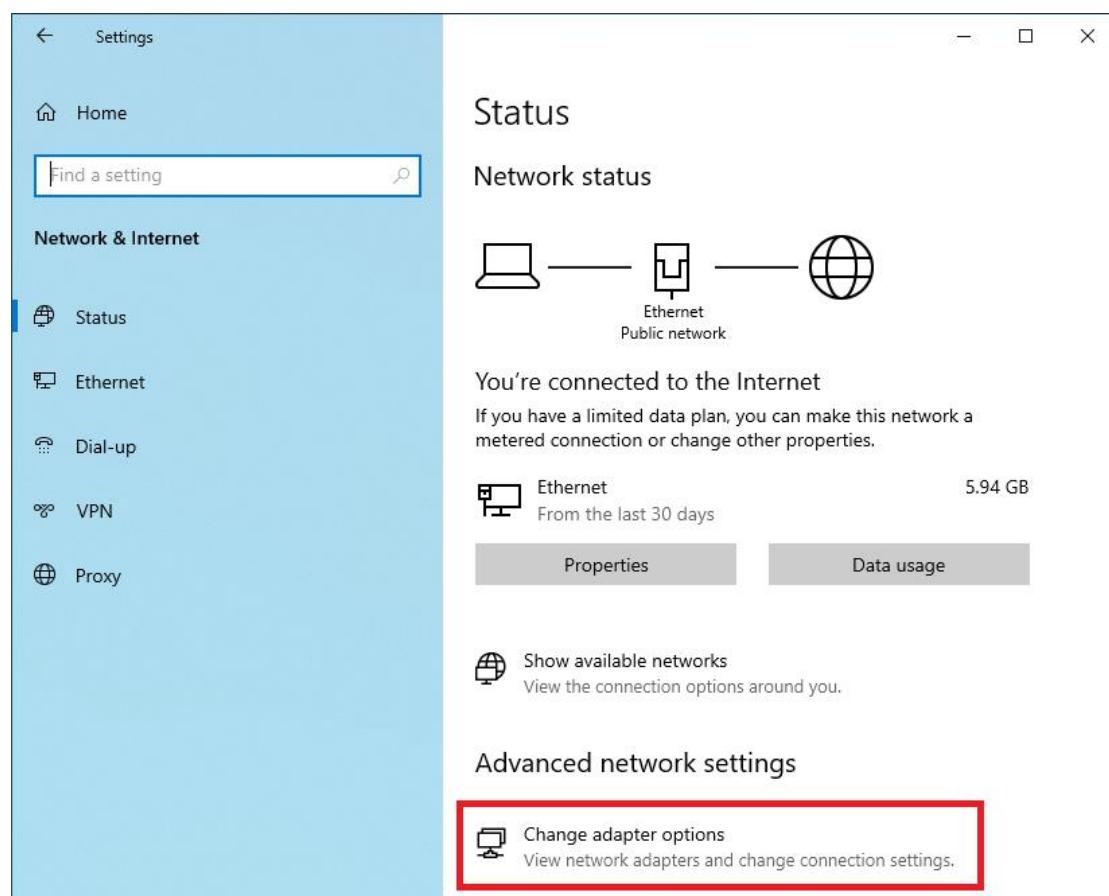

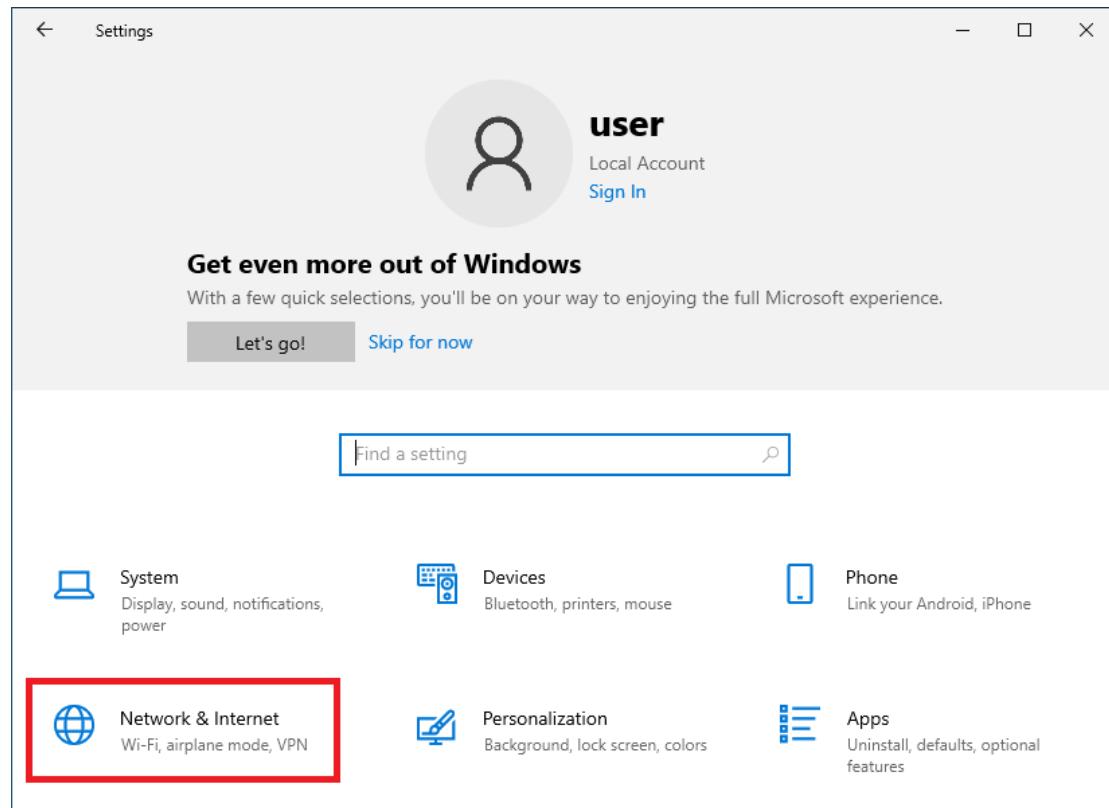

Note1: Cable please using CAT6 or above.

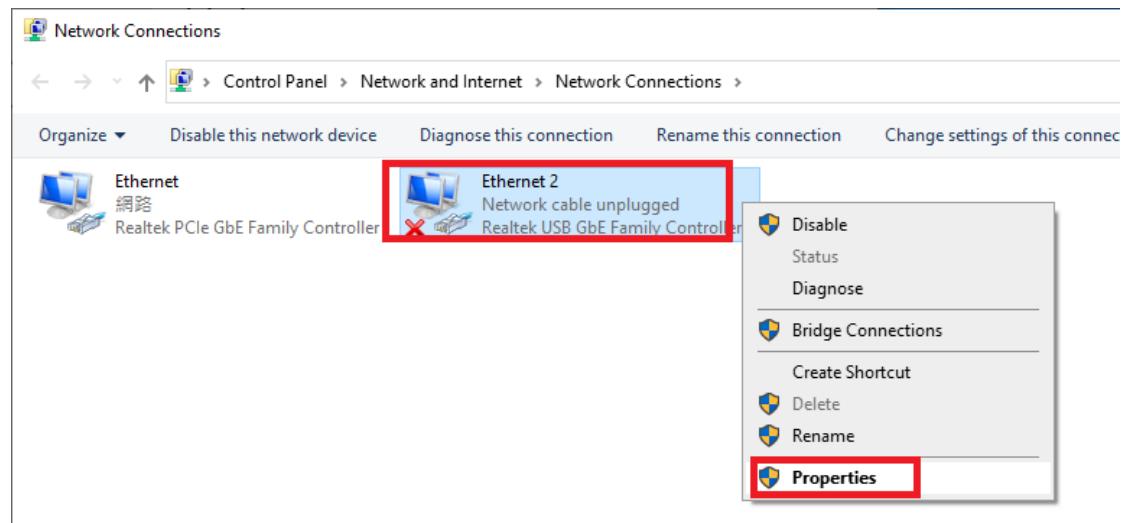

Note2:The Switch hub must be capable with 1000Mbps or above.

## 3-2 Internet Setting

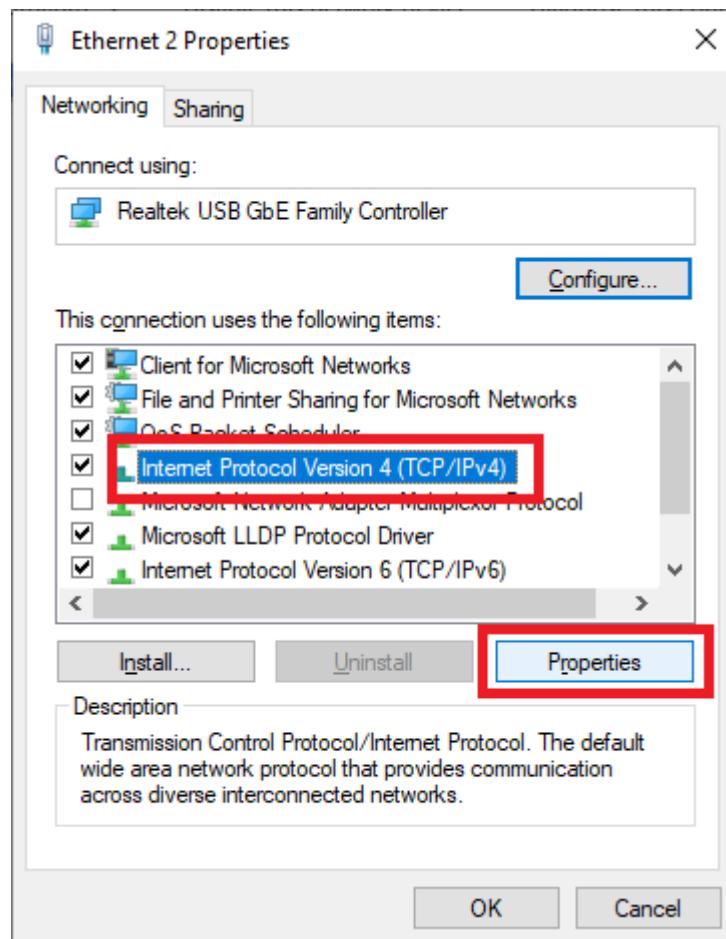

3-2-1 Start → Settings → Network & Internet → Change adapter options

## 3-2-2 Ethernet → Properties

## 3-2-3 Click Internet Protocol Version 4 (TCP/IPv4) → Properties

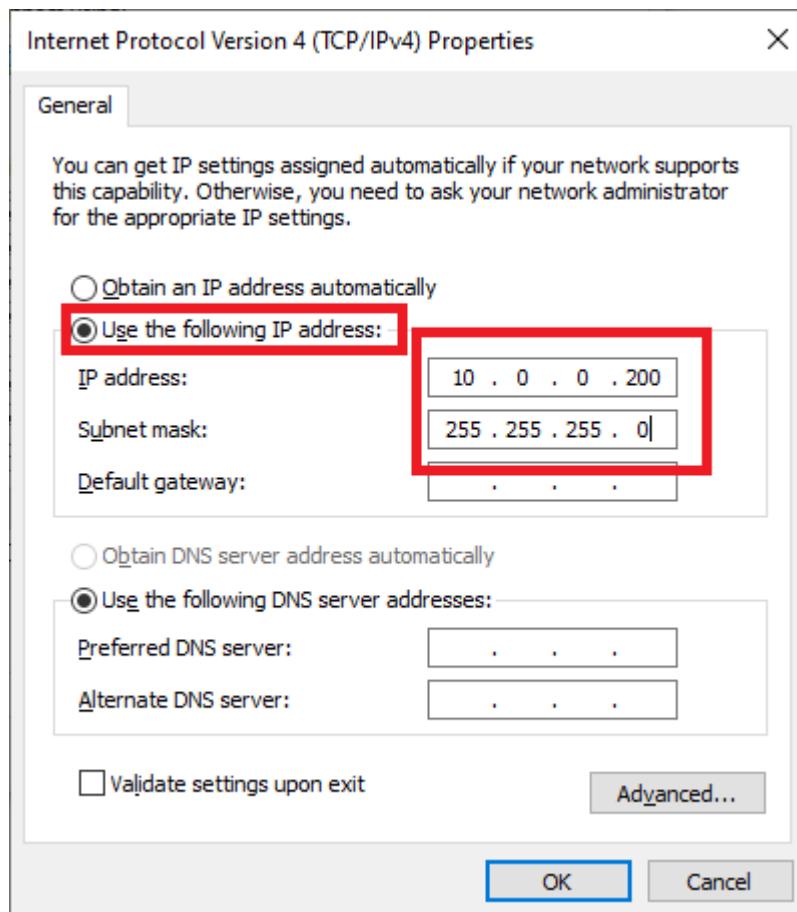

## 3-2-4 Select Use the following IP address → Set IP address &amp; Subnet mask → OK

IP address : 10.0.0.200 (Range : 10.0.0.1 ~ 10.0.0.254)

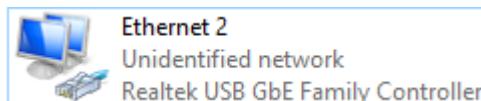

Note : PC and EMC6 must have different IP address. Default IP for EMC6 is 10.0.0.10.

Subnet mask : 255.255.255.0 (Fixed)

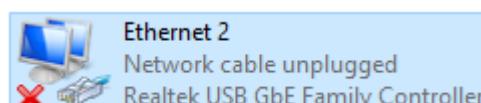

### 3-2-5 Confirming the link between the EMC6 and the PC.

# If link is correct, the logo will show connected(as pic below)

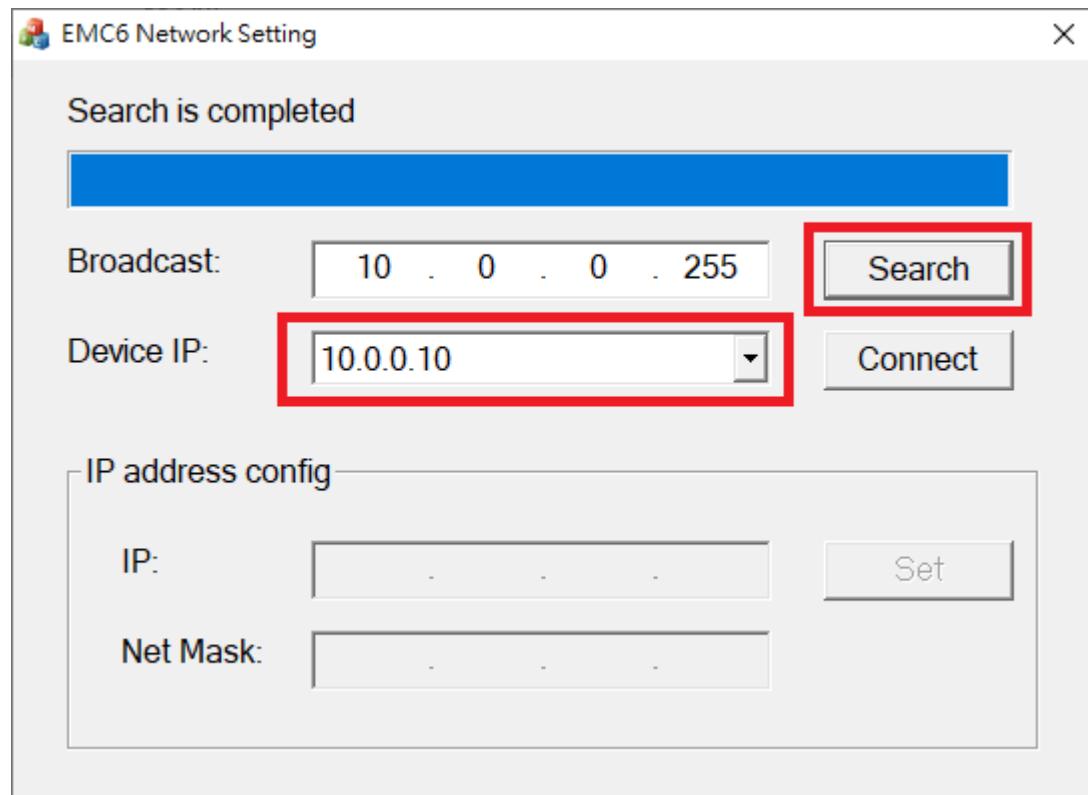

# If link is incorrect, the logo will show the cable is removed(as pic below)

3-2-6 Link confirming: Execute 「C:\Program Files (x86)\Marking Mate\Drivers\EMC6\EMC6\_Broadcast.exe」

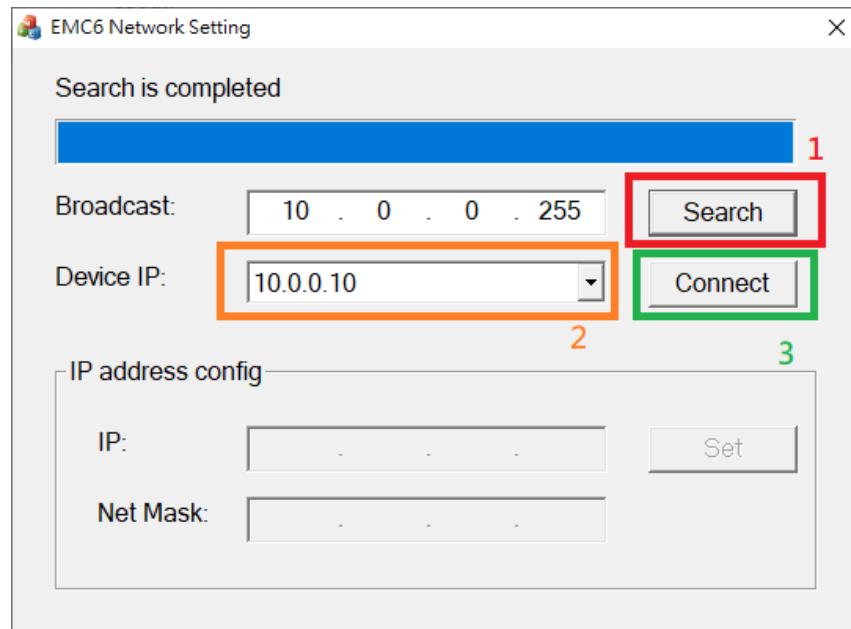

# Click on Search, if everything is going well, the Device IP is appeared within the EMC6 IP field.

### 3-3、Change EMC6 IP address

3-3-1 Execute C:\Program Files (x86)\Marking Mate\Drivers\EMC6\EMC6\_Broadcast.exe

3-3-2 Click on Search→Choose the Device IP which will be edited→Click on Connect

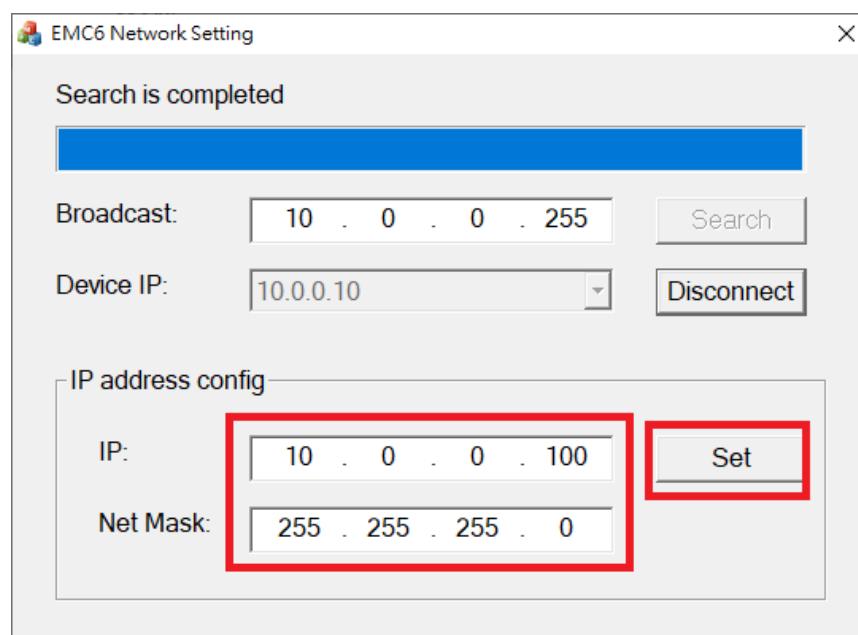

3-3-3 Input IP and Net Mask→Click on Set

IP : 10.0.0.1 ~ 10.0.0.254

Note: Under the circumstances of multiple controllers, each controller should be given an unique IP address.

Net Mask : 255.255.255.0

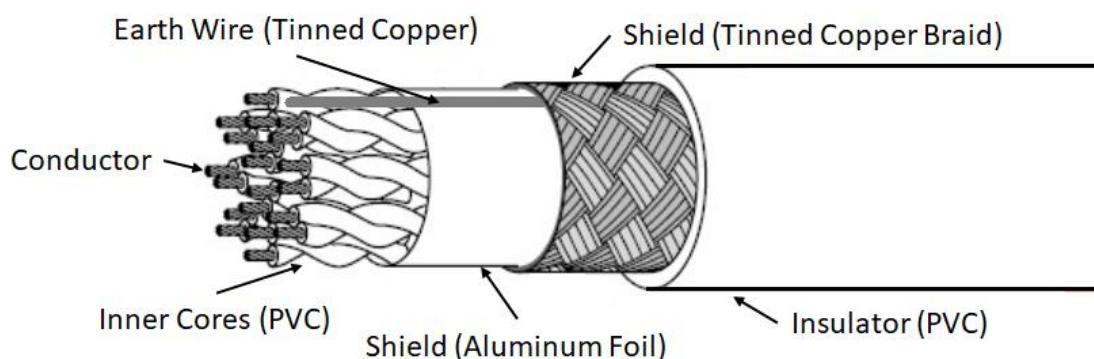

3-3-4 After Setup, the EMC6 must be reboot by breaking the power connection.

## 4. Cable Connection

### 4-1 Cable

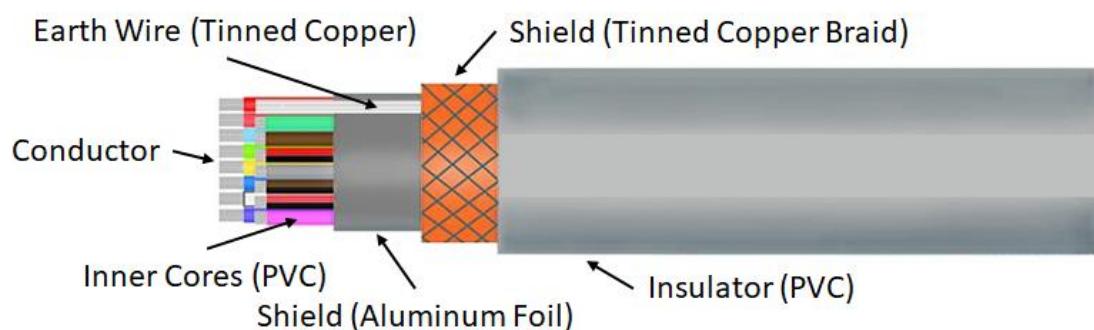

#### 4-1-1 Differential

The differential signal should use a shielded twisted pair cable to wire. Positive signal and Negative signal should use the same pair.

#### 4-1-2 Others

The cable should choose a shielded wire, and there should be tinned copper braid between insulator and inner cores.

## 4-2 D-SUB welding

While welding D-SUB connector, should take care the protection of core, and the earth GND wiring.

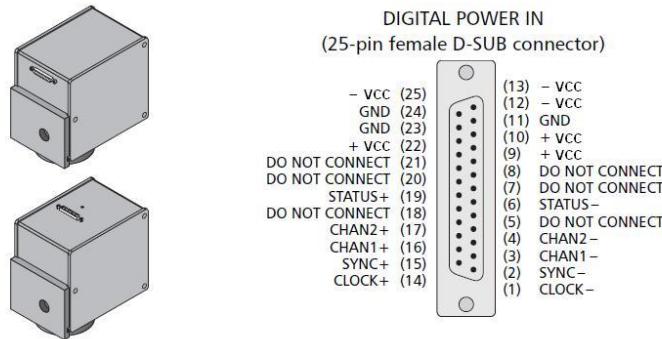

The cover of D-SUB is recommended in metal material.

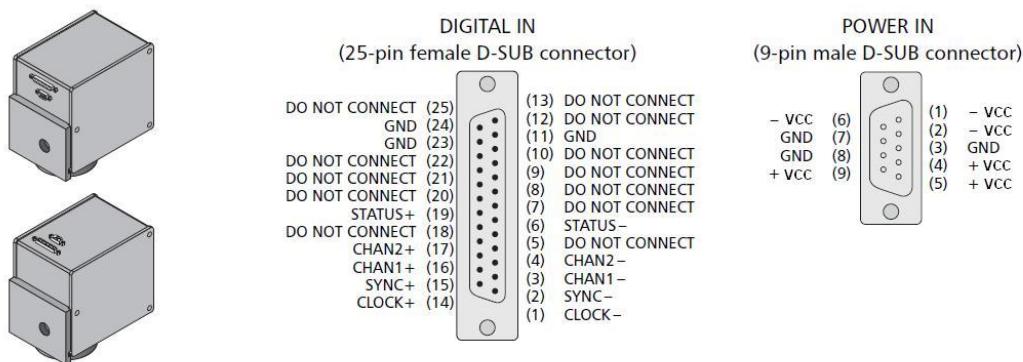

## 4-3 Scanner Cable Connection

### 4-3-1 XY2-100 16Bit Scanner

- Type 1 XY2-100 16Bit : With one D-SUB 25Pin

- Type 2 XY2-100 16Bit : With D-SUB 25Pin and D-SUB 9Pin

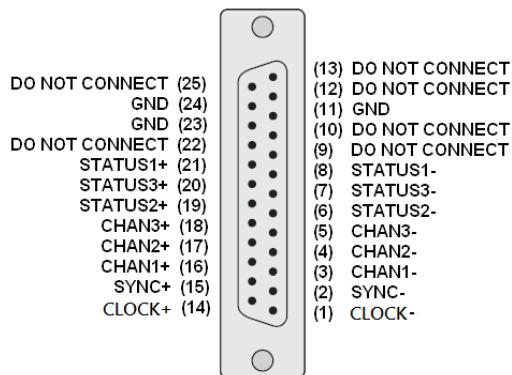

Notice:

- EMC6 P1 is corresponding to digital ScanHead D-SUB25Pin. User could easily connect them by 25-pin pin to pin cable; however, if using type 1 ScanHead, user has to wire to power source from the cable.
- For the power source: User has to wire all pins of them, which means has to wire 3 pins of the +VCC, 3 pins of the-VCC, and 3 pins of the GND. Only wire to 1 pin of +VCC, 1 pin of-VCC, or 1 pin of GND is forbidden.
- Power GND should short to EMC6 GND.
- Max cable length is 5M. Cable should cover with shield and isolated.

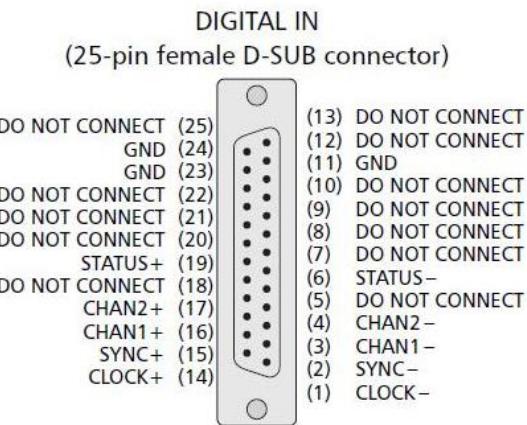

### 4-3-2 Raylase XY2-100-E 18Bit Scanner

Wire is similar to XY2-100 16Bit scanner, except add additional 2 Status signal.

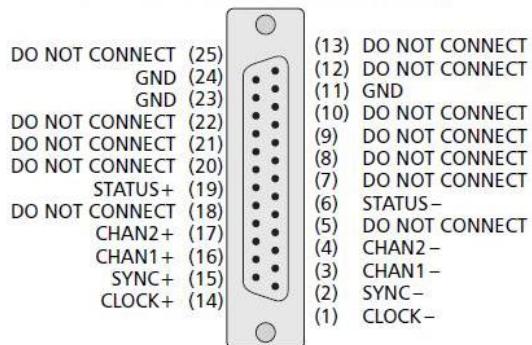

### 4-3-3 CTI XY2-100 20Bit Scanner

Wire is same to XY2-100 16Bit scanner.

### 4-3-4 CANON 20Bit / 64Bit Scanner

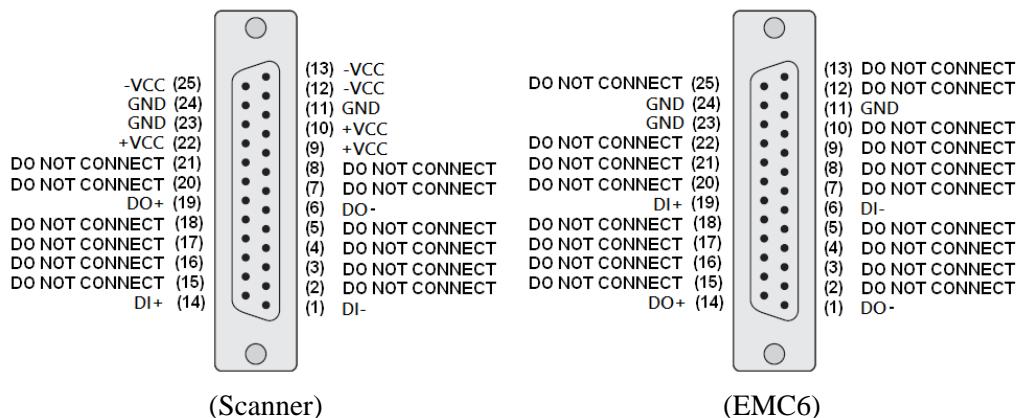

Wire is same to XY2-100 16Bit scanner.

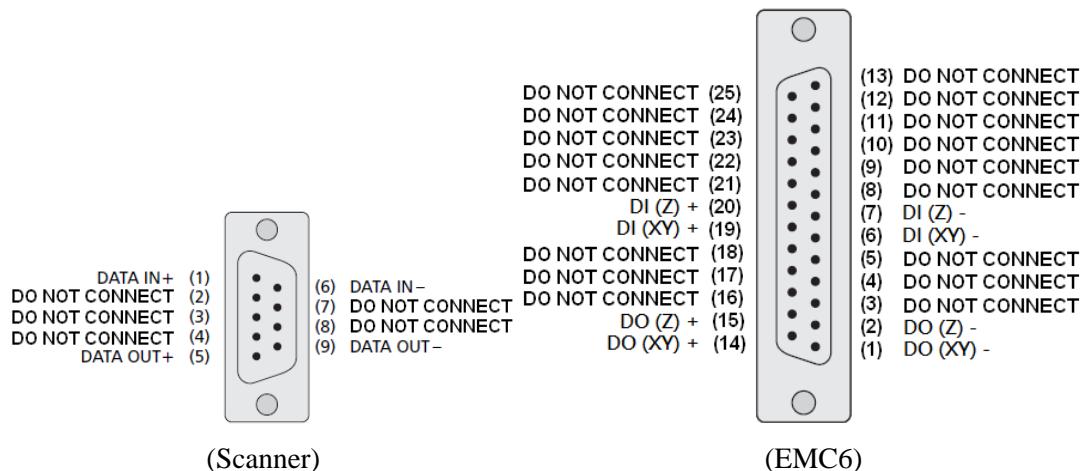

#### Notice :

- 20Bit Scanner setting : Parameter ID = 67 (20) 、 Parameter ID = 68 (0)
- 64Bit Scanner setting : Parameter ID = 65 (5) 、 Parameter ID = 66 (5) 、 Parameter ID = 67 (20) 、  
Parameter ID = 68 (0)

### 4-3-5 ME-Link Scanner

### 4-3-6 SL2-100 20Bit Scanner

| SL2-100 D-SUB 9F |     | EMC6 P1 D-SUB 25F    |         |
|------------------|-----|----------------------|---------|
| Description      | Pin | Description          | Pin     |
| DATA IN+         | 1   | DO (XY) + / DO (Z) + | 14 / 15 |
| DATA IN-         | 6   | DO (XY) - / DO (Z) - | 1 / 2   |
| DATA OUT+        | 5   | DI (XY) + / DI (Z) + | 19 / 20 |
| DATA OUT-        | 9   | DI (XY) - / DI (Z) - | 6 / 7   |

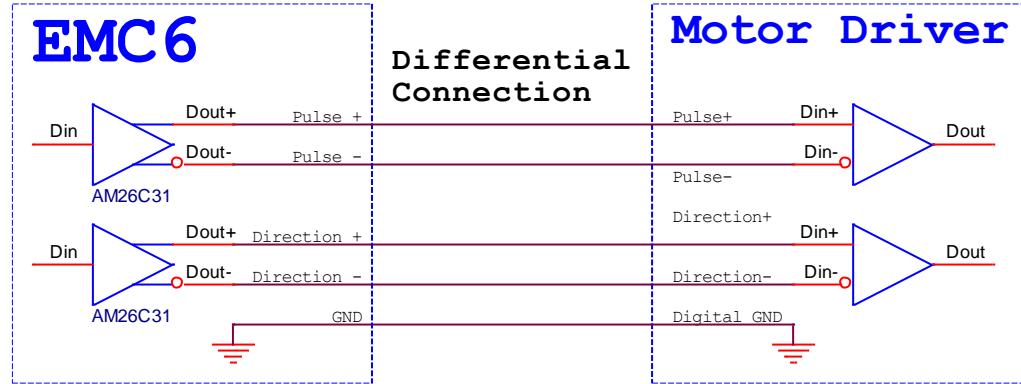

#### Notice :

- Scanner GND should not short to EMC6 GND. Otherwise scanner will keep static.

## 4-4 Stepper / Servo Motor Servo Cable Connection

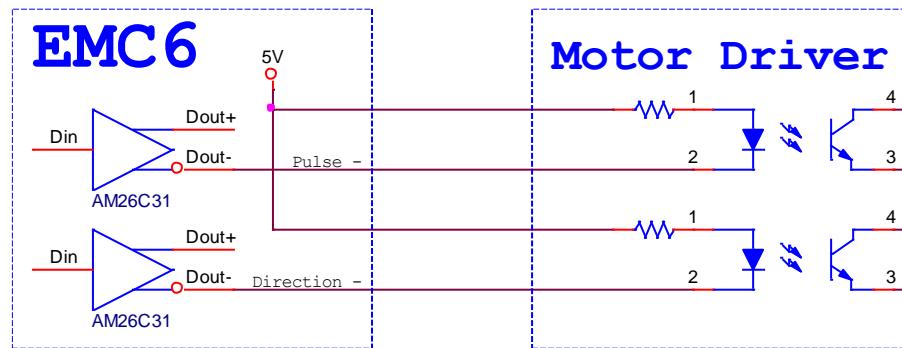

According to the Differential types of Motor Driver, there are three ways of connection between Motor Driver and EMC6's P5 ~ P8 connectors.

### 4-4-1 Differential Signal

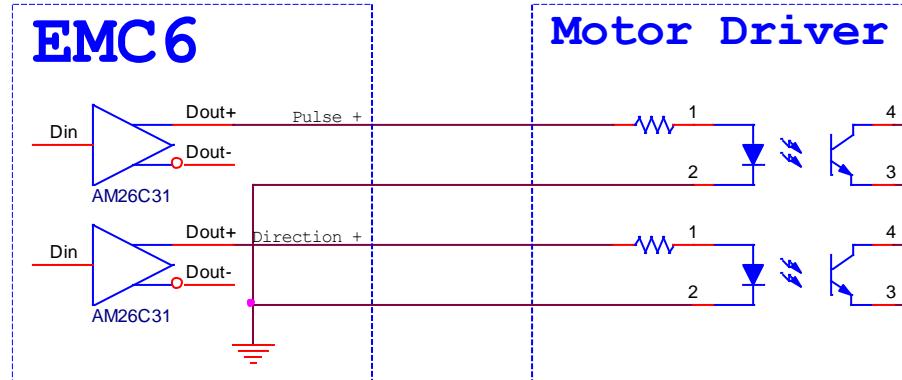

Note : Motor Servo GND should short to EMC6 GND.

### 4-4-2 Common Anode

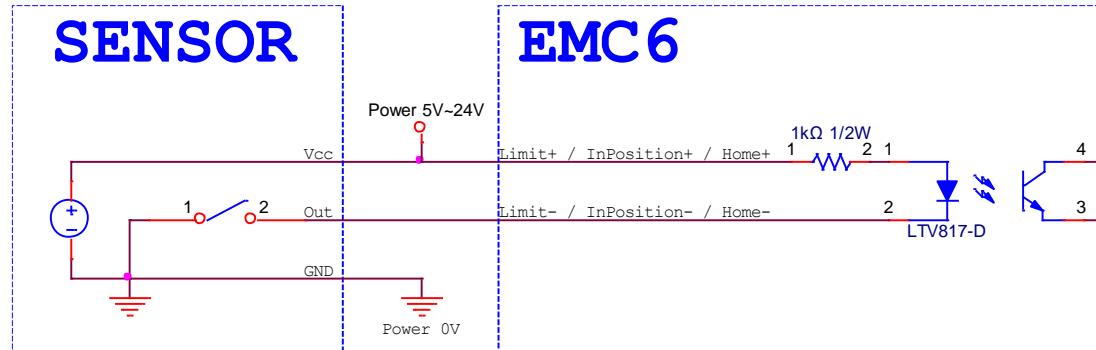

### 4-4-3 Common Cathode

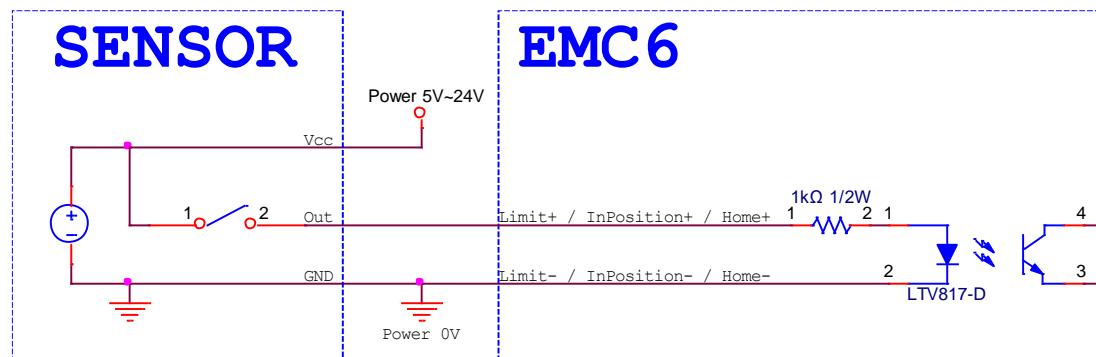

## 4-5 Sensor Connection

### 4-5-1 Common Cathode (NPN)

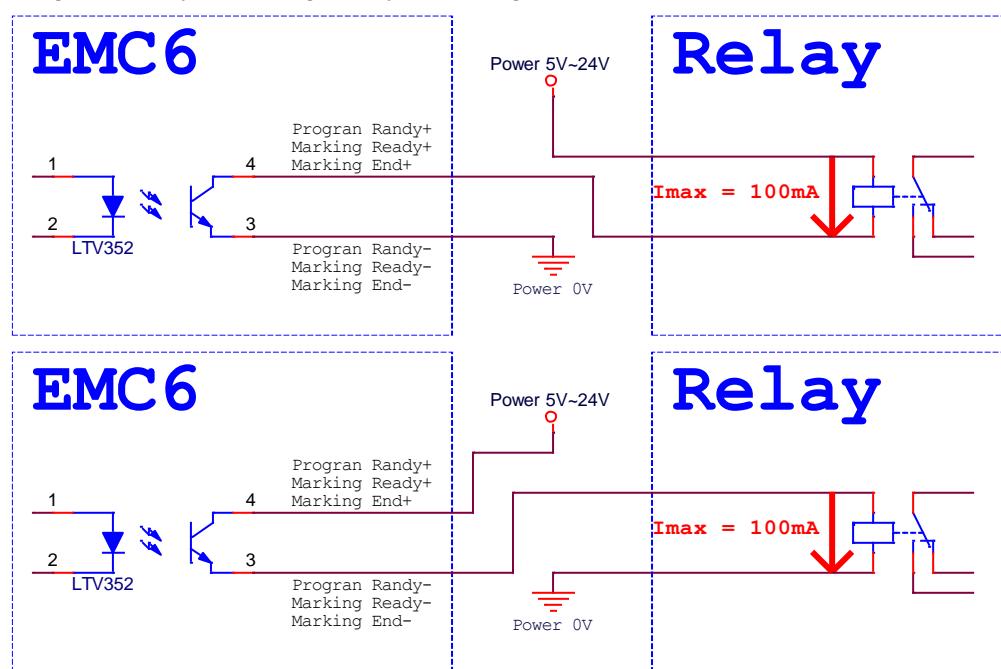

### 4-5-2 Common Anode (PNP)

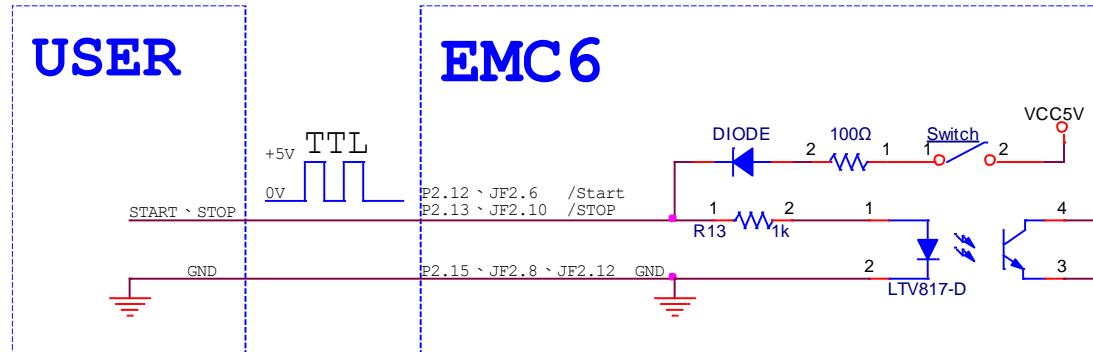

## 4-6 Optical coupler Connection

Program Ready / Marking Ready / Marking End Connection

## 4-7 Start and Stop Connection

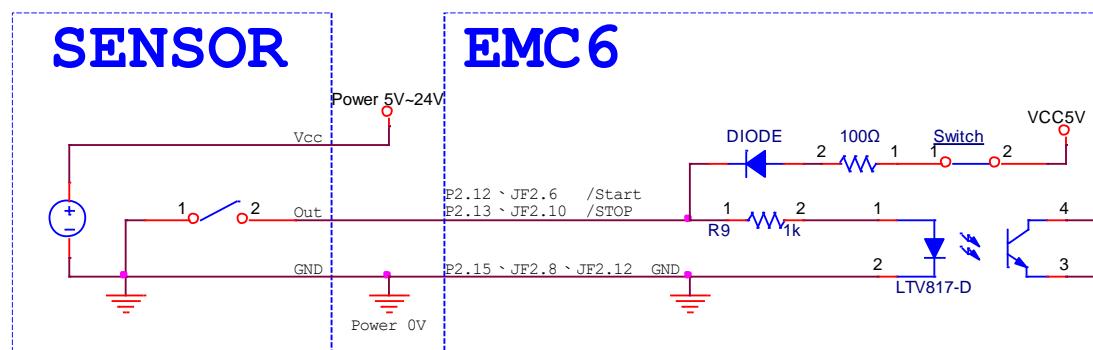

### 4-7-1 Button

Note : Please set Common Cathode, Please refer to [3-9 HWConfig Setting Description](#).

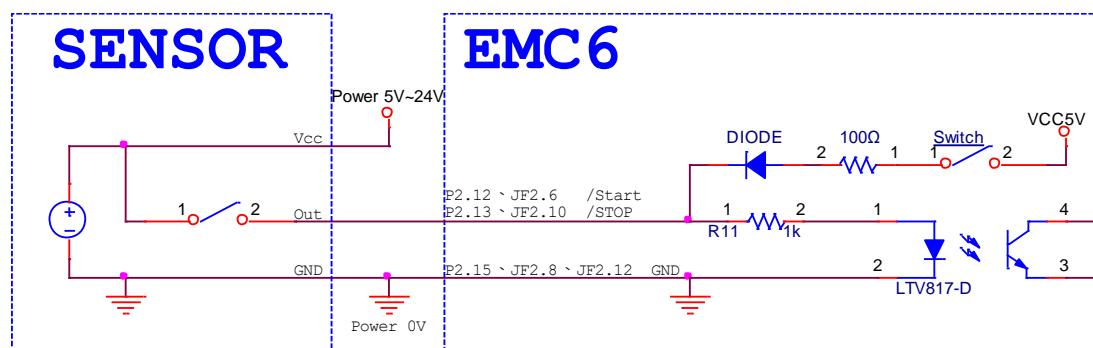

### 4-7-2 Sensor

- Common Cathode (NPN)

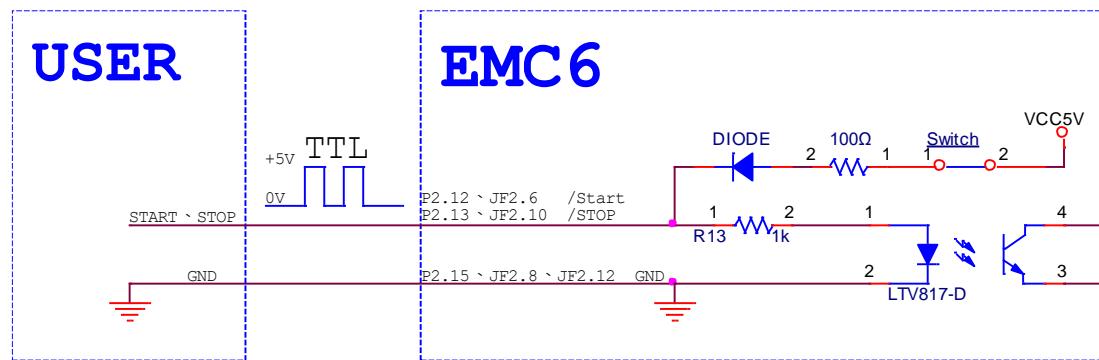

Note : Please set Common Cathode, Please refer to [3-9 HWConfig Setting Description](#).

- Common Anode (PNP)

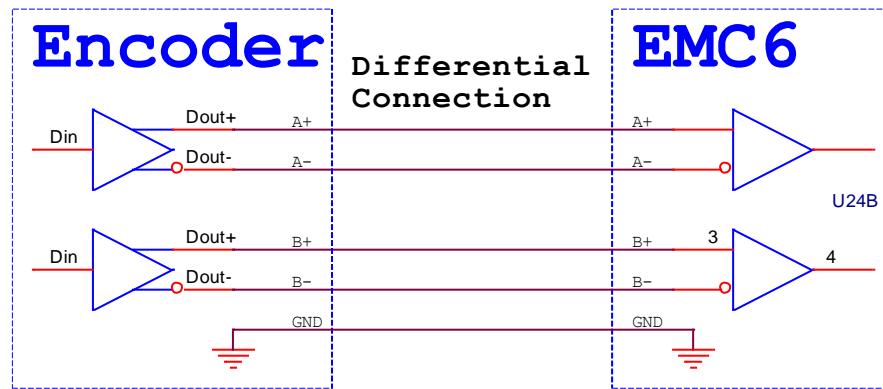

Note : Please set Common Cathode, Please refer to [3-9 HWConfig Setting Description](#).

### 4-7-3 TTL Signal

Note : Please set Common Cathode, Please refer to [3-9 HWConfig Setting Description](#).

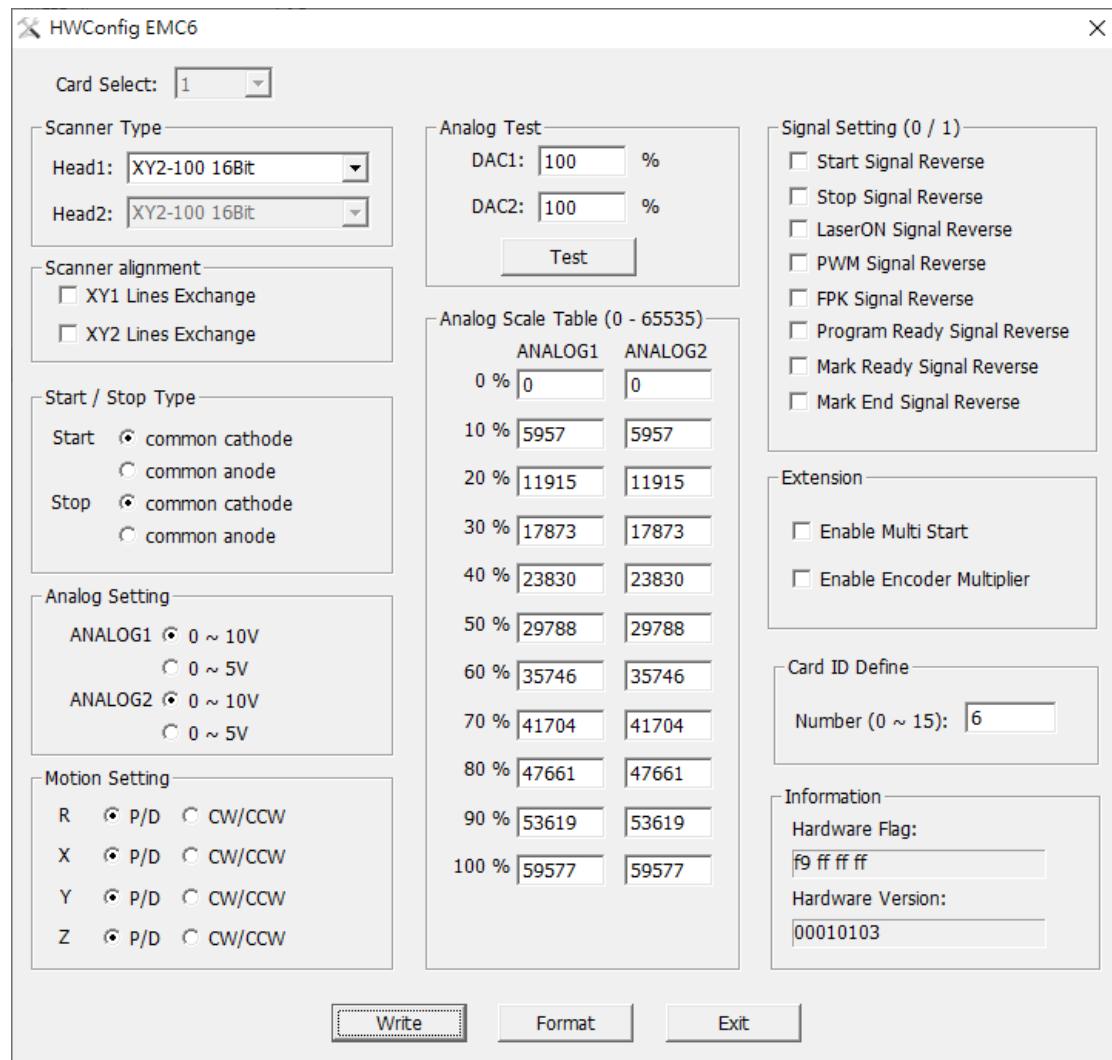

### 4-8 Encoder Signal

Note : Encoder GND should short to EMC6 GND.

## 4-9 HWConfig Setting Description

File Address : C:\Program Files\Marking Mate\Drivers\EMC6\HWConfig.exe

### 4-9-1 Scanner Type

Set P1、P2 Scanner Type

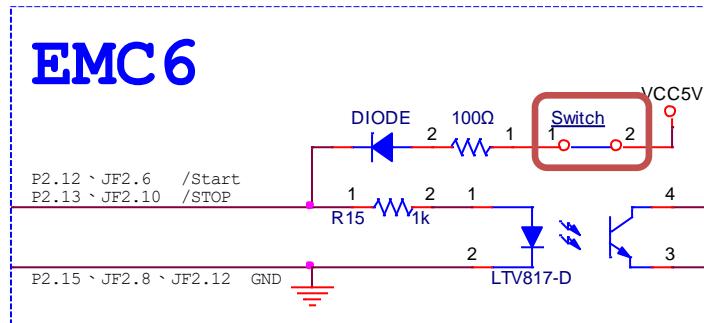

- **XY2-100 16Bit** : Typical digital signal for most of scanner on market.
- **Raylase XY2-100-E 18Bit** : Raylase SS-III Communication specifications.
- **CTI XY2-100 20Bit** : CTI XY2-100 Protocol 20Bit Communication specifications.
- **Canon 20Bit** : Canon scanner setting : Parameter ID = 67 (20)、Parameter ID = 68 (0)
- **Canon 64Bit** : Canon scanner setting : Parameter ID = 65 (5)、Parameter ID = 66 (5)、Parameter ID = 67 (20)、Parameter ID = 68 (0).
- **ME-Link** : Need to unlock the function.
- **SL2-100 20Bit** : Need to unlock the function.

## 4-9-2 Scanner alignment

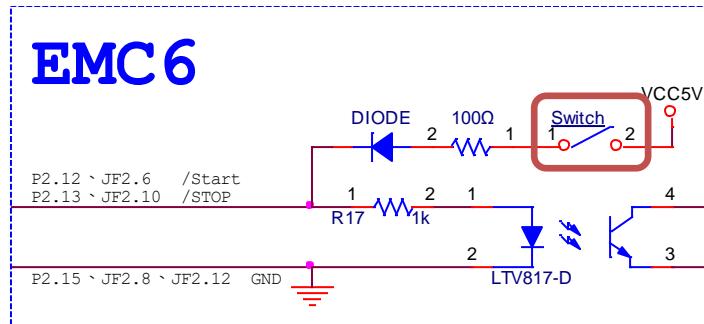

Exchanging X and Y line will affect correction file.

## 4-9-3 Start / Stop Type

- **Common Anode :** Figure Switch Close, /Start ∵ /Stop Active Low.

- **Common Cathode :** Figure Switch Open, Start ∵ Stop Active High.

## 4-9-4 Extension

- **Enable Multi Start :** While in automation mode, multiple starting marking signal trigger is allowed.

## 4-9-5 Motion Setting

- **Pulse Direction / CW CCW :** Select Motion output Pulse/Dir or CW/CCW.

## 4-9-6 Analog Setting

Select DAC1& DAC2 as 0~5V or 0~10V.

## 4-9-7 Analog Scale Table

Fine tune Analog1 and Analog2 output voltage.(0 ~ 65535 ≈ 0V ~ 11V)

#When press Format, the value will be set as default.

## 4-9-8 Analog Test

Make test Analog1 and Analog2 easier when adjust Analog Scale Table. When pressing Test, Analog1 and Analog2 will change to corresponding voltage.

## 4-9-9 Signal Setting

Enable Active Low.

## 4-9-10 Card ID Define

Setting card ID (For multi-card use).

## 4-9-11 Information

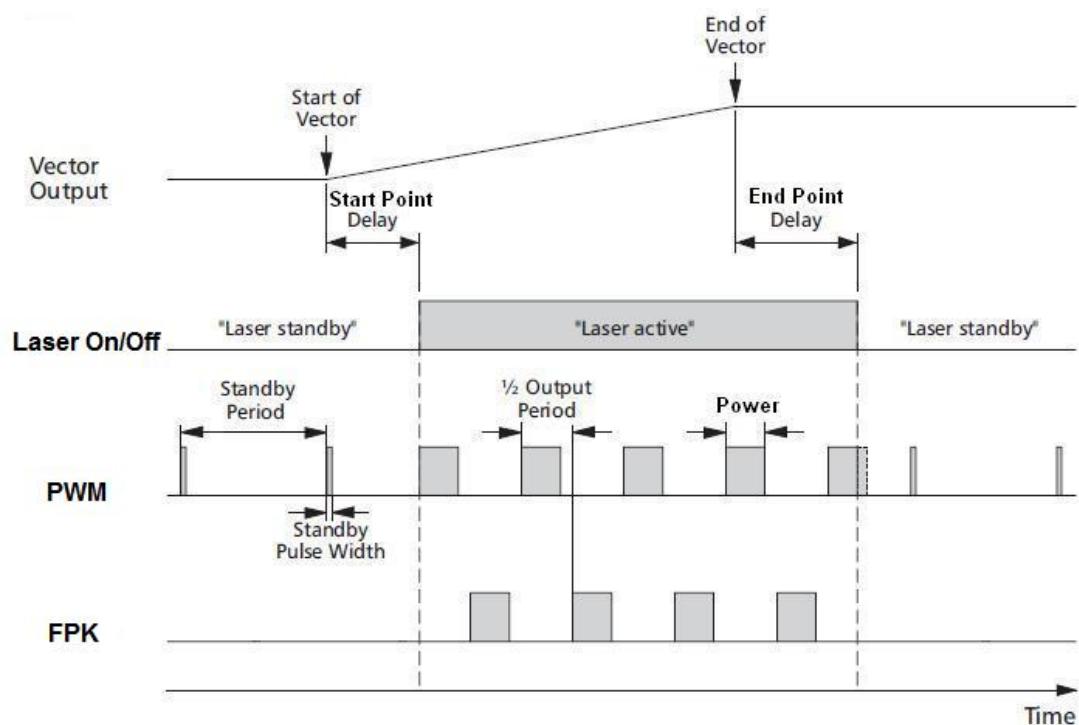

EMC6 related information.

## 4-9-12 Button

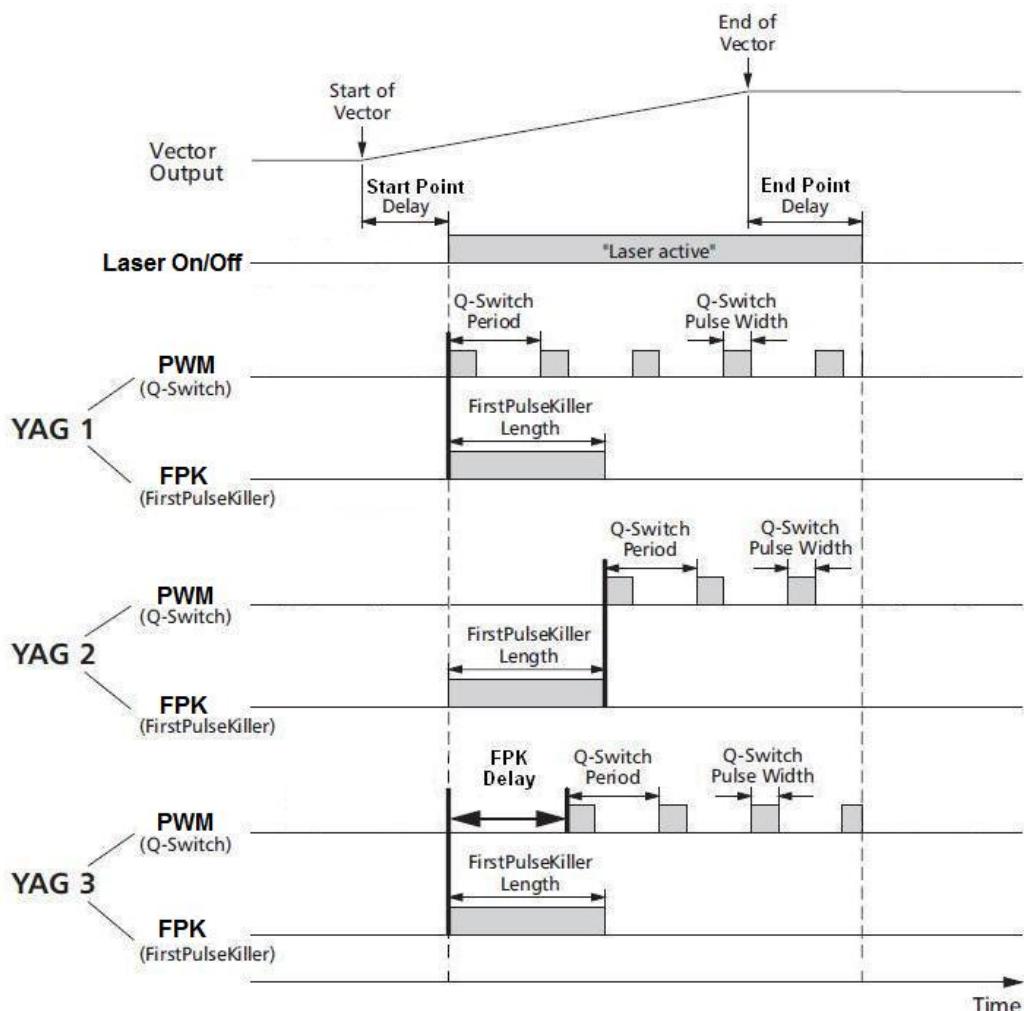

- **Write :** Click to reply any setting change.
- **Format :** Return every setting to default.
- **Exit :** Exit HWConfig.

## Appendix1 : Various Laser Setting Modes

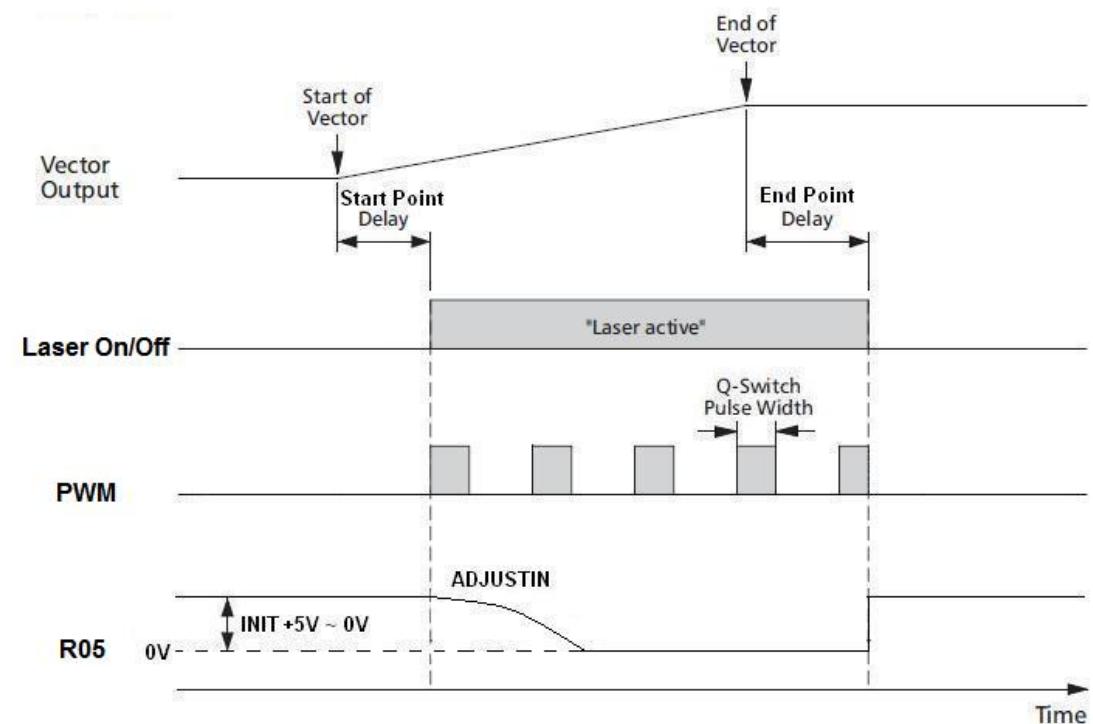

### TYPE 1 : CO2 Mode

## TYPE 2 : YAG 1-3 Mode

### TYPE 3 : R05 Mode

## Appendix2 : LED Status

D7 : Boot success is bright, boot fail is dark. (**Note 1**)

D5 : Power status. Power level normal is bright

D6 : Seven-segment display. D6 is the card ID.

D1 ~ D4 : STATUS

| Status                         | Descript                              | Note                    |
|--------------------------------|---------------------------------------|-------------------------|
| D1D2 and D3D4 flickering       | Boot success but not execute software | Normal                  |
| D1 flickering, others darkness | Software opened                       | Normal                  |
| Flickering at the same time    | Boot error and enter backup session.  | Failure( <b>Note2</b> ) |
| Keep bright or darkness        | Boot error.                           | Failure                 |

**Note1:** If D7 is darkness, please contact the product supplier for help.

**Note2:** Please confirm if device manager has found the control card. If yes, please execute HWUpdate.exe to update.
